Abstract

Nowadays, along with the huge development of social media such as Twitter, Facebook and YouTube. More and more new social networking software has come to the public's mind. For example, TikTok. TikTok is application that is available for everyone to publish their videos and the video length ranges from 15 seconds to 1 minute. The videos include daily entertainment, talent show, knowledge popularization and so on. Thanks to the good reputation of TikTok, videos on this platform go viral and bring a sense of relief to the audience a temporary escape from real life. However, along with the increase in the viewing group, there is also an increase in teenagers download this app and start recording videos at home, school, market and anywhere. People start arguing that TikTok has brought too many negative effects to teenagers. In research, there are both positive and I negative effects of TikTok. The subject of this study is basically teenagers and there will be various articles to compare and support results. All data are from Science Direct, Taylor & Francis Online, google scholars etc. As a result, TikTok has had a non-negligible impact on teenagers in three aspects TikTok can be used as an educational tool, it can satisfy the teenage mentality, but it contains excessive content that forms the value of a teenager in a misleading way.

Introduction

TikTok was introduced to the social media marked in September 2016 and its immediately established as a dominant force in the world of social sharing. The medium swiftly gained popularity among young people all around the world as a wave of celebrities added their profiles to the platform. On TikTok, users can upload videos that last for around 15 seconds. These films play continuously until the user chooses to go on to the next one. In Asian nations including Pakistan, Japan, Indonesia, Malaysia, Thailand, and India, TikTok has become wildly popular. In contrast to Instagram, which took almost six years from launch to reach the same number of active users as TikTok has in less than three years, popularity has been largely explosive in these nations. Owing to a slew of controversies, TikTok was briefly banned in Pakistan and India in 2019 due to "morality issues." It has been criticized on numerous instances of not doing enough to safeguard its users, who are primarily young adolescents and adults. People are becoming more and more enthusiastic about using the Internet as a result of the advent of digital media. Trends, nevertheless, are seldom permanent. Without a question, one of the most well-known apps at the moment is TikTok. Teenagers, who make up the majority of TikTok users, now have a new platform on which to express themselves. Millions of adolescents between the ages of 12 and 20 share their short videos on TikTok. In Covid-19, media platforms and internet usage time have increased.

People have a good chance of being viral merely because of one video, and this kind of system encourages it. It encourages an increasing number of people to create brief videos, which fuels the growth of the TikTok trend. Despite being a privately held firm, TikTok has seen a positive development that has caused individuals to recognize its commercial potential and start looking for new business there. Since most individuals just utilize their fragmented time to amuse themselves on the app, the drawbacks are still unclear to most people, but we should take into account TikTok underlying impacts when we devote our free time to it.

So The majority of TikTok effects on teenagers are negative, and this research effort examined those effects. Young people in large numbers are drawn to this application. However, many users of the software claim that TikTok is a platform that has more negative than beneficial effects. While Tik Tok has the potential to transmit good vibes, it may also serve as a forum for bullying. On the app, some users make movies mocking others while others critique the films of others. This has a detrimental effect on everyone involve d’s mental health and can result in choices and

circumstances that could be fatal. Due to the lack of membership limits on TikTok, outsiders can simply message youngsters and cause dangerous situations.

However, there are benefits to watching TikTok videos as well, therefore these will be mentioned as well. Then, information was gathered from TikTok users, and it was then coded and processed to produce the outcome. There are three categories of impact: educational, social, and perceptual. With a greater knowledge of TikTok influence, parents, teachers, and other adults may keep an eye on teenagers and enforce laws, including not allowing them to use social media while they are studying, while also building positive relationships with them.

Due to a constant stream of celebrities taking the stage, the media has grown to be a source of attraction for teenagers and young adults all over the world. The objective of the current study, which is qualitative in nature, was to understand the core justifications behind young people' validation of Tik Tok, a well-known video-making site. It encourages internet use, and most individuals spend their time on pandemic. Users of TikTok can create their own videos as well as view, share, and comment on other people's work. Because they consistently create video material, some people get greater fame or fans in the community. Senft described those who meticulously curate their social media presences as "micro celebs" and "bloggers" (Dekhil, 2021).

We've gathered a collection of literature sources that broadly discuss the objectives in this field. A study done on the TikTok app revealed that it is a common practice to place greater emphasis on the users and their demands. UCD solicits client input and uses a range of research and planning approaches in order to enhance highly valued and accessible products for them. TikTok relies completely on the knowledge and comprehension of its users. TikTok depends entirely on the knowledge and comprehension of its users. This software is more than simply a social network; it focuses on user invention and makes it simple for users to exhibit their talent.

According to another article in The Economic Times, the Indian Supreme Court has decided that the app TikTok should not be downloaded because it features "pornographic and improper content" Physical damage to children was a possibility.2019 (The Economic Times). In spite of the blocked content, there are 88.6 million TikTok users in India as of 2019. Young people's prospects and mental health are harmed when they develop strong attachments to TikTok.

Children and teenagers in India are also at risk for high crime rates, internet predators, and cyber stalking.

Additionally, using, broadcasting, and downloading any videos are prohibited in India. TikTok can be used by kids to connect with people who have similar interests as them as well as to meet new people. Teenagers of all ages share this kinship, despite the mystique that internet media fosters. TikTok provides distinct evidence without requiring direct participation because it is appropriate for young children's development. According to surveys, teens and young adults prefer to conduct relational or intelligent searches. Aside from lounging around, engaging in entertainment, and data seeking, these are the questions that teenagers and young adults ask the most. Studies show that the main reason young people use the TikTok is to overcome perceived inadequacies inside oneself.

There are already roughly 35 TikTok celebrities with sizable fan bases. Although this type of business is often favored because progress is defined by the interchange of information and, in large measure, the knowledge region, it is still unregulated and can send out particular demands. The Indian government removed TikTok from the Google Play and Apple App Stores in 2019. This happened as a result of a court ruling that expressed concern over the transfer of explicit material via the app.

TikTok was previously outlawed in Bangladesh and severely punished in the US for collecting information about children without their consent. Clients who are of an age to be influenced by local patterns are affected by the absence of guidelines, and as the local area has expanded from a neighborhood to a global scale, the likelihood of unfavorable consequences has increased as well. According to this study, 650 Thai young men and women between the ages of 16 and 25 reported that 85% of their interactions with TikTok were negative. After half of the participants were sent out in the open, 90% of the meetings were prompted by nagging or sexual advances.

A study done on the TikTok app revealed that it is a common practice to place greater emphasis on the users and their demands. UCD solicits client input and uses a range of research and planning approaches in order to enhance highly valued and accessible products for them.

Rationale:

This study's goal is to investigate any effects that Tik tok usage may have on people's mental health, particularly young people. How does this use impact young people's mental health? Will Tik tok have a negative impact on upcoming generations? This research, which employs the qualitative method, is carried out to provide answers to all of these questions.

Methodology

Objectives

These are the study's goals, which are listed below:

1.To explain the interaction between the variables affecting TikTok popularity.

2. To investigate the rationale for the sudden, obscene investigation of the TikTok application.

3. To identify the direct and indirect effects of the application

Problem statement

TikTok is currently causing a variety of issues between the sexes. For example, a beauty complex, a superiority complex, and an inferiority complex. Addiction to TikTok is impacting both those who are inspired by the platform's videos and the creators of those videos. It results in various complexes in young people.

Conceptual definitions:

Youth

According to WHO, "Youth" refers to people aged 15 to 24.

TikTok

TikTok is a social networking platform where users may upload and watch short videos. Videos range in duration from 15 to 60 seconds.

Inclusion

Only people who have used TikTok or are aware of it will be included in the sample.

Exclusion

Participants who do not utilize or are unfamiliar with TikTok will not be included in the study.

Procedure

Designs and setting

An analysis conducted in accordance with Griesheim and Landman was combined with an inductive qualitative content analysis (Eloy & Kyngäs, 2008). (2004). The qualitative content analysis goes beyond the simple extraction of objective material and is flexible and systematic in uncovering individuals' patterns and interactions between components or within a specific context on how Tik tok affects young people's physical and psychological health. The most effective strategy was determined to be qualitative content analysis to gather in-depth information on these topics. In order to reach participants with the greatest diversity in terms of racial, cultural, age, and educational attainment, Rawalpindi and Islamabad were chosen as the research cities.

Participants

Five students participated in one-on-one semi-structured interviews. Participants' ages ranged from 20 to 25 and their educational backgrounds were diverse.

Data collection

To gather information, semi-structured interviews were used. To make the process of gathering in-depth information easier, the initial author conducted all interviews while being of the same sex as the participants. All interviews were conducted one-on-one, on tape, and in an appropriate location selected based on the preferences of the participants. The researcher began the interview by explaining the procedure in a friendly and open way to gain trust and establish a situation which facilitated the interview. The interview began with the following open-ended question to set the scene: " Do you think that people are wasting their more time on Tik tok than Studies?" Then other questions followed: "does people ever copy the behavior of tiktokers after using it?" and "do people find any satisfaction from using TikTok profile and “ on TikTok very young girls often display themselves in proactive ways do you fell that it destroys the image of female in society ”The interview continued in an open-minded way with suitable probing questions, depending on the participant’s responses, guiding them through the interview, helping them to

explain their experiences regarding influence of social media specially TikTok app on teenagers. The duration of the interviews varied from 20 to 40 minutes.

Ethical considerations:

An informed consent form outlining the goals of the study, a confidentiality agreement, a provision about voluntary participation, etc. was given to each prospective participant. Students may only take part in the study if they agreed to the informed consent

Data analysis:

Griesheim and Landman's structure was used to guide the analytical approach (Griesheim & Lund man, 2004). Interviews were consequently verbatim transcribed within 24 hours of each session. The first author looked through the transcriptions multiple times to get a basic sense of the facts and to check for accuracy. As the transcripts were examined line by line, specific semantic units were identified and specified. To keep the vital content, meaning units were distilled and given codes. Based on their similar content, the detected meaning units classified as codes were compared and grouped into clusters. Subcategories and categories were generated by codes with similar common material, indicating the primary manifestations and their ties to the study's goal. The number of participants who expressed experiences regarding impacts of TikTok on teenagers. According to Griesheim and Lund man's structure (2004) an experience phrased by one or a few participants were given the same space or meaning as one expressed by all participants when creating the category system. Finally, the underlying meaning in the categories formed themes that constituted the latent content presented in Table 1, Table 2, Table 3, table 4 and table 5.

Table 1

Content description of the theme "Tik tok is a complete wastage of time" and associated categories and subcategories.

Theme	**Category**	**Sub categories**
TikTok is complete wastage of time	Lip syncing	Time consuming Unnecessary drama

	Addictive	Withdrawal from studies
		Lack of focus
		Feeling of sadness
		Lack of interest
		Lack of emotional support
		Absence of exercise and ignorance of healthy habits
		Feeling of sadness and

Table 2

Content description of the theme "people admire tiktokers to adopt new trends" and associated categories and subcategories.

Theme	**Category**	**Sub category**
people admire tiktokers to adopt new trends.	Elation	Feeling of acceptance
		Self confidence
		Motivation

Table 3:

Content description of the theme "Different attitudes of Tiktokers leads towards shaming" and associated categories and subcategories.

Theme	**Category**	**Sub categories**

Different attitudes of Tik tokers lead towards shaming.	Lack of self-acceptance	Shame Bullying
	Lack of confidence	Social withdrawal

Table 4

Content description of the theme TikTok is a source of entertainment and associated categories and sub categories.

Theme	**Category**	**Sub categories**
TikTok is a Source of entertainment	Performance\ accomplishments	Dance
		Pranks/beauty hacks
		confidence/self acceptance

Table 5

Content description of the theme Identity revealing of girls has a negative impact on society and associated categories or sub categories.

Theme	**Category**	**Categories**
Identity revealing of girls has a negative impact on society.	Body dissatisfaction	Feeling ashamed of one's own body
		self- harm against the body
	Lack of self acceptance	Shame Bullying

		Social withdrawal

Results

In this paper, a primary research has been conducted through content analysis of social media users comments and feedback on TikTok and its effect on children. The idea was to look for most commonly used words (expressed as experience with TikTok application). Data was highly qualitative. The qualitative data collected was transcribed and codified. Conceptual model is based on high level of qualitative data abstraction and thematic correlation. Based on codes and labels, coded findings of content into semi-structured themes. Themes included

1. Tik tok is a complete wastage of time.
2. people admire tiktokers to adopt new trends.
3. Different attitudes of Tik tokers lead towards shaming.
4. TikTok is a source of entertainment
5. identity revealing of female have negative impacts on society

1.Tik tok is a complete wastage of time

Without a doubt, the current generation is wasting their valuable time. Although the Tik Tok app was created for entrainment, individuals are increasingly becoming addicted to it. Particularly the adolescents waste time on Tik tok. They dedicate their entire day to creating solely tik tok videos. At this age, when one should be working hard to build a career, people are spending their time on tik tok. Everyone at tik tok wants to be famous, but they are unaware that in order to become a decent actor, they must attend auditions rather than waste their time on tik tok. Children are now devoting less time to their schoolwork as a result of tik tok, and they spend their entire day on their Android phones viewing and creating tik tok movies. As The respondent 1 said that “TikTok is pointless in her opinion because it offers more disadvantages than benefits. they give TikTok their whole attention. They scroll through it nonstop for no reason, which results in the majority of their time being squandered”. Teenagers are likely to spend a lot of time on the app, and some may even develop an addiction to the films after a while. TikTok may cause students to perform worse in school It is obvious that TikTok is a platform for watching

enjoyable, occasionally humorous videos and expressing creativity. People who wish to entertain themselves and others by expressing themselves creatively are the target audience for TikTok. The app store descriptions emphasize its role as a video generating app since it encourages users to be inspired by videos they view and become their own makers, despite the official website's main page indicating that it is a video watching app. Respondent 2 said that " people are wasting more time viewing videos on Tik Tok since it provides pleasure for everybody, and because both ladies and boys enjoy watching new trending videos and listening to music, regardless of what the trend is about. People who are addicted "Teenagers are likely to spend a lot of time on the TikTok app, and some may even develop an addiction after a while. TikTok may cause students to perform worse in school. Although watching the films is entertaining, they inevitably become a hindrance. It gets more challenging to maintain balance over time.

2.People admire tiktokers to adopt new trends.

As more and more people visit the app to check what's trending in fashion, music, food, art, etc., TikTok popularity is on the rise TikTok app is developed to assist people in showcasing their talent through the production of short trending films. The videos may be humorous, uplifting, imitation, etc. No matter how quirky or unusual you're for You page might be, the video-sharing platform's simple use and clever algorithm produce a rotating cycle of TikTok trends that quickly fall in and out of popularity. For TikTok creators, trends are beneficial because they stimulate the creation of new, consistent material for an algorithm that rewards consistency. Being early to a trend can also result in millions of video views and increase a creator's popularity. Trends can also help launch careers and build small enterprises. Respondent 3 said that "people do copy them since everything has its own influence. Nowadays, everyone uses Tik tok, and if people admire someone, they must replicate their styles, their way of speaking, their manner of wearing, etc. in order to present themselves as them in order to gain attention.

3.Different attitudes of Tiktokers lead towards shaming.

Tik Tok is unhealthy for people mentally, physically or emotionally. It pressures them to fit unrealistic stereotypes and if you don't you can't get popular (which is honestly for the better.) Don't get pulled into Tik Tok and they think they need to change their self to become popular on the stupid platform. If they just want to watch comedy videos and magic tricks and post dances

and do challenges with their friends. this platform is ultimately toxic for body image; it cultivates a risk of being the target of someone else's body-shaming comments.

4.TikTok is a source of entertainment

TikTok has a lot of amusing features that can be used to create engaging material. Nowadays, the majority of teens like it primarily. Nearly 81 million individuals produce TikTok videos daily and post them to the website. This has developed into a significant leisure activity for the majority of aspiring performers, housewives, teenagers, and kids. However, as this app's popularity has increased, it has started to have an effect on these people's personal and social lives. The videos could be amusing, motivational, imitative, etc. Most of these films were just for fun and enjoyment. This is useful for taking 15-second animated videos and adding channels, music, activities, and other decorations to them before recording, editing, and sharing them. Users can watch and comment on any TikTok video here. With TikTok, social media networking is supposed to be a blast. TikTok has swiftly grown to be incredibly popular since it offers a platform for creating comedy and lip-syncing videos. Users can produce videos that are up to 15 seconds long by choosing tunes, sound effects, or sound bites from a database. Users can also collaborate and perform a "duet" with one another by replying to someone else's video and creating a split-screen diptych. Users' own sounds can also be added, making it possible to lip sync to someone else's original video. Because of everything said above, TikTok is really entertaining to use, and as a result, it has quickly grown. TikTok is currently among the most well-known entertainment apps. It also acts as a career choice for many young individuals that increases their notoriety. But TikTok relentless rise is also having an impact on younger people and other generations. Respondent 3 stated, "For instance, it makes people happy. A girl's mind is tempted to make movies as a kind of enjoyment while she scrolls through TikTok. She had faith that others would enjoy, share, and comment on her videos, and that over time, her fan base would certainly expand. She was happy and successful because of her profile. Additionally, she will allow others to follow her profile because doing so will help her become well-known. A user often receives an award for their achievement when they gain one more followers. It is clear that TikTok is primarily made for fun by both male and female users. Furthermore, regardless of gender, it can be claimed that TikTok has an impact on users' personal lives. They grow enraged and angry when their videos do not acquire likes, compliments, and complimentary remarks.

5.Identity revealing of female have negative impacts on society

Young females are under pressure to sexualize themselves on Tik Tok. Views increase when more skin is exposed. It shouldn't be necessary to subject 9-year-old girls to that. They believe they must perform in front of a camera while sporting tiny-ass crop tops and booty shorts. They resemble little thots. They have so many other responsibilities that if they aren't as attractive as the girls who are wearing 10,000 pounds of cosmetics, it lowers their self-esteem. Tik Tok is influencing how individuals act as well as how they dress. Since they feel that in order to be popular at school, they must expose flesh and wear scrumcaps, they feel pressure to act in a similarly seductive manner toward the boys as well. Don't get me wrong, though; Tik Tok can also have a detrimental impact on men. Many young people who use Tik Tok also have YouTube channels where they publish longer videos and discuss other topics. I don't think it's a problem for someone who is of legal age for each of the platforms (13 years old) to post entertaining dancing videos or create YouTube challenges with friends; those are all enjoyable game-related activities. But lately, incidents like these have begun to occur. The negative effects of social media include things like increased levels of anxiety and sadness, poor sleep, body image difficulties, etc. Without a doubt, women are the backbone of civilization. Tik Tok is bad for a person's mental, physical, or emotional health. They are under pressure to conform to unfair stereotypes because if they don't, they won't be popular (which is honestly for the better.) Avoid being drawn into Tik Tok by those who believe they need to change who they are in order to be successful on the foolish site. If all they want to do is watch funny movies, perform magic tricks, share dances, and compete against their friends.

Discussion

In this research we discover that most of the kids, use TikTok often and take have an effect on. maximum of our Interviewers understand that with the use of TikTok we beautify our capabilities and we're in a position to expose off our know-how. however, they do admit it as their yearning, they actually can’t permit themselves far from TikTok for a bargain time. This research seeks to provide an essential precis of TikTok customers, an unexpectedly growing app.

the modern-day generation is losing their treasured time. notwithstanding the reality that the Tik Tok app become created for entrainment, people are increasingly turning into addicted to it. particularly the children waste time on Tik tok. teenagers are probably to spend some of time at the TikTok app, and a few can also even develop a dependency after some time. TikTok may additionally motive students to carry out worse in school. despite the truth that looking the movies is entertaining, they unavoidably come to be a difficulty. It gets extra hard to keep stability through the years.

TikTok popularity is on the upward push TikTok app is advanced to assist human beings in showcasing their skills via the manufacturing of quick trending movies. The videos may be humorous, uplifting, imitation, and many others. no matter how quirky or unusual you’re for You web page is probably, the video-sharing platform's easy use and clever algorithm produce a rotating cycle of TikTok traits that quick fall interior and out of recognition. For TikTok creators, traits are useful due to the fact they stimulate the appearance of new, regular material for an algorithm that rewards consistency.

Tik Tok is unhealthy for humans mentally, bodily or emotionally. It pressures them to healthy unrealistic stereotypes and in case you don’t you can’t get well-known (that's in reality for the higher.) Don’t get pulled into Tik Tok and they suppose they need to trade their self to emerge as famous at the stupid platform. TikTok has swiftly grown to be especially famous because it offers a platform for creating comedy and lip-syncing movement pics. customers can produce movement snap shots which can be up to 15 seconds long with the aid of deciding on tunes, sound results, or sound bites from a database. customers also can collaborate and carry out a "duet" with each other via replying to someone else's video and developing a split-show screen

diptych. customers' very own sounds also can be introduced, making it feasible to lip sync to someone else's original video

The horrible consequences of social media embody such things as accelerated ranges of hysteria and disappointment, horrible sleep, body image troubles, and so on. absolutely, girls are the backbone of civilization. Tik Tok is terrible for someone's mental, bodily, or emotional health. they are beneath pressure to comply to unfair stereotypes because in the occasion that they do now not, they won't be popular (this is truly for the higher.) keep away from being drawn into Tik Tok by using way of people who receive as authentic with they want to change who they're so that it will acquire fulfillment at the foolish net website. If all they want to do is watch funny films, perform magic tips, percent dances, and compete towards their friends.

My analysis show that teenagers in emerging adulthood are more likely to lose track of time on TikTok the more they use the app throughout the day. This then could negatively impact how they are able to pay attention in studies.

Conclusion

To summarize, as a part of the high sense of existence in teenagers' network global, TikTok has a profound have an effect on at the youth, in an academic, social, and perceptual way. although the majority of the outcomes it brought to the general public were effective, some flaws need to be cited. however, ordinary, TikTok affords people with a platform to specific themselves. definitely, it has modified humans' approaches of socializing, however TikTok nevertheless faces outstanding demanding situations. to properly manual the public's health improvement, TikTok must consciously assume public duty, and do not forget the blessings of brief video transmission, and make contributions to the exposure of way of life. To be unique, there are some improvements TikTok could make in the destiny. as an instance, TikTok can pressure all minors to have call authentication, which means teens below the age of 18 need to apply their identity card to create an account on TikTok. on this manner, each the TikTok management team and the teenagers' parents can higher supervise the use of TikTok and consequently accurate capacity mistakes. alternatively, TikTok may want to coerce teens to take a spoil when they've been with no end in sight the usage of TikTok for more than two hours. After two hours, the app will mechanically exit the interface, and young adults will not be able to log in until day after today. In a word, given that TikTok is one of the greatest social media software, it should take on the obligation of promoting an effective guiding strategy, advocating the advantages of a brief video, and subsequently contributing to the boom of teenagers' minds.

Limitations:

- TikTok may abate their academic achievement due to the fact college students may discover this application a hindrance of their learning procedure.
- Young adults can get entry to now not simplest learning films, but additionally films which can be associated with their options, inclusive of journey, meals, sports activities, beauty, gaming, and others.
- It's miles intuitive that these pursuits will distract them from what they're purported to do, along with homework assignments.
- Moreover, with the frequent use of social media, children generally tend to have interaction in non-associated gaining knowledge of or mission content material at the

same time as doing assignments, which can also cause an addiction of the use of the app extra than they must.

Suggestions:

- TikTok also promotes 21st century skills, including communication, collaboration, creativity, and critical thinking.
- In relation to communication as a social media, TikTok publishes some videos lacking quality information.
- Though TikTok can filter videos with the help of tags, there is no certainty whether the content is suitable for the adults.
- Hence, the instructors should assist the youth by suggesting quality channels they can follow when doing any tasks using the app.
